# Tanisha Tasnin

ON, Canada

647-222-3048 tanisha.tasnin03@gmail.com linkedin.com/in/tanishatasnin github.com/tasnint

## EDUCATION

**McMaster University**

*Bachelor of Engineering in Software and Biomedical Engineering*

- Relevant Courses: Databases: SQL Server and Database Management Systems, Concurrent System Design, Data Structures and Algorithms, Discrete Mathematics, Linear Algebra, C and Bash Scripting, Object Oriented Programming, Software Architecture & Design, Applications of Machine Learning, Functional Programming, Anthropology

## TECHNICAL SUMMARY

**Languages**: Python, Java, C, C++, SQL, JavaScript, React, TypeScript, Tailwind, Golang, Flutter, Solidity, Elixir, PostgreSQL, GraphQL

**Technologies & Frameworks**: NodeJS, MongoDB, Firebase, Google Cloud Platform, Azure, Spring Boot, Git Version Control, Kubernetes, Docker, REST APIs, Ash, Phoenix, TensorFlow, Keras, scikit-learn, NumPy, PyTorch, Linux

## WORK EXPERIENCE

**Applied Reports Company** | *Full Stack Software Developer Intern* **May 2026 - August 2026**

- Implemented LLM extraction pipelines that turn unstructured text and image inputs into searchable fields
- Audited scoring and weight-fusion logic in the search layer and proposed solutions projected to improve quality of search results by **20%**
- Built evaluation suites with **LLM-as-judge rubrics** and target **metrics** to measure the output quality of **AI pipelines**
- Designed and shipped end-to-end features, such as generating and displaying captions from photos, spanning the entire tech stack using **Elixir**, **Phoenix**, **Ash**, **PostgreSQL**, **React Native** and **TypeScript**
- Designed a product vision memo proposing new features and a renovation of the existing platform to address user feedback

**EECOMOBILITY Inc.** | *Software Developer* **May 2025 - May 2026**

- Designed a **REST API** platform enabling remote access to **1000+** EV battery testers and associated **SQL databases**
- Built **quality assurance** workflows with **unit**, **integration**, and **system** testing, improving platform reliability by **30%**
- Implemented a **data ingestion** pipeline with **Python ETL scripts**, **Azure Blob Storage**, and **Power Automate** to optimize storage efficiency and data accessibility across local systems, **Azure**, and **SharePoint**
- Decoupled **system architecture** using **Socket.IO** to support async state updates and cleaner service boundaries
- Incorporated new anomaly detection techniques for battery datasets using **NumPy**, **pandas**, **scikit-learn**

## PROJECTS

**Wild-or-Fire?** | *Python, TensorFlow/Keras, Google Cloud Platform, ML*

- A **Convolutional Neural Network** (CNN) based **deep learning** wildfire detection system identifying fires from satellite images
- Implemented and evaluated multiple CNN architectures including **ResNet18**, **EfficientNet (B0 variants)**, and **MobileNetV2**, selecting the optimum model based on generalization stability, error patterns, and inference efficiency

**PolyBalance** | *Go, Kubernetes, Docker, Prometheus*

- Built a **load balancer** featuring multiple routing algorithms, TLS termination, IP-based rate limiting, circuit breaker failover, and real-time health monitoring
- Implemented a live monitoring dashboard with dynamic strategy switching with a **microservices architecture**, rate limiting controls, and visual load distribution analytics for backend server management
